Another small study was conducted by a group of scientists in southern France, a region hard hit by COVID-19. This, also, was not a randomized trial. Instead, the scientists compared 26 patients who received hydroxychloroquine to 16 who did not: after six days, the virus was gone from the body in 70% of those given the treatment, compared to only 12.5% of those who weren't.

Answer From Jerry W. Swanson, M.D.

The term "ocular migraine" can be confusing. It generally means a headache that's accompanied by changes in vision. But the term is often used interchangeably to refer to two different conditions: migraine aura, which usually isn't serious, and retinal migraine, which could signal something serious.
